Fencepost looping

Write a program using that asks the user for a number then prints the integers from 1 to that number.

The list will be comma separated enclosed in square brackets.

Must match format of expected output (class website).

No if or if/else, etc allowed!

Three example outputs (in bold text):

Enter a number: 7
[1, 2, 3, 4, 5, 6, 7]
…
Enter a number: 1
[1]
…
Enter a number: -1
[-1]
