

9.  $(5, 3)$

10.  $(1, -3)$

11.  $(-4, 5)$

12.  $(3, 22)$

13.  $(6, 7)$

14.  $(8, -7)$

15.  $(5, -8)$

16.  $(0, 2)$

17. In Step 2, the expression for  $y$  needs to be substituted in the other equation;  $8x + 2(5x - 4) = -12$ ,  $8x + 10x - 8 = -12$ ,  $18x - 8 = -12$ ,  $18x = -4$ ,  $x = -\frac{2}{9}$

18. In Step 3, 6 should be substituted for  $x$ , not for  $y$ ;  
 $3(6) + y = 9$ ,  $18 + y = 9$ ,  $y = -9$
