

Good morning! Here is your warm-up! :)

Check Skills You'll Need

Lesson 1-3

Using only appearances, will the lines intersect?

NO

Yes

NO

Identify the plane represented by each surface of the box.

- 4. the bottom *SRM*
- 6. the front *KNM*
- 8. the left side *PKN*

- 5. the top *PKL*
- 7. the back *PSR*
- 9. the right side *LEN*

**What were the building blocks of Euclidean geometry?**

- Points

- Lines

- Planes

**Definition of a line?**

A straight arrangement of points that extends

**forever** in two directions

What if we just considered just a part of a line...

**Segment**

- Consists of 2 pts & all pts btwn that lie on the line containing the 2 pts.
- Has length but no thickness (duh! it is part of a line...sheesh!)
- Named by the 2 endpoints:

$\overleftrightarrow{AB}$  line AB  
 $\overline{AB}$  segment AB

Name all the segments shown in this line:

$\overline{XZ}$  same  
 $\overline{XY}$

$\overline{XY}$  same  $\overline{YX}$   
 $\overline{XZ}$   
 $\overline{YZ}$

Now...what if you jump onto a line & look in 1 direction?

### Ray

- Ray  $AB$  is the part of  $AB$  that contains pt A & all pts on  $AB$  on the same side of pt A as pt B
- Has direction but no thickness
- Has *infinite* length
- Named by the endpt & one other pt on the line

Is  $\overrightarrow{AB}$  the same as  $\overrightarrow{BA}$ ?

### Opposite Rays

- 2 collinear rays that share the **same** endpoint
- Together they **always** form a Line

Above, which opposite rays together form line  $\overleftrightarrow{XZ}$ ?

### Parallel Lines

- **Coplanar** lines that do not intersect

- Represented by the symbol  $\parallel$

- If line  $AB$  is parallel to line  $FG$  then  $\overleftrightarrow{AB} \parallel \overleftrightarrow{FG}$

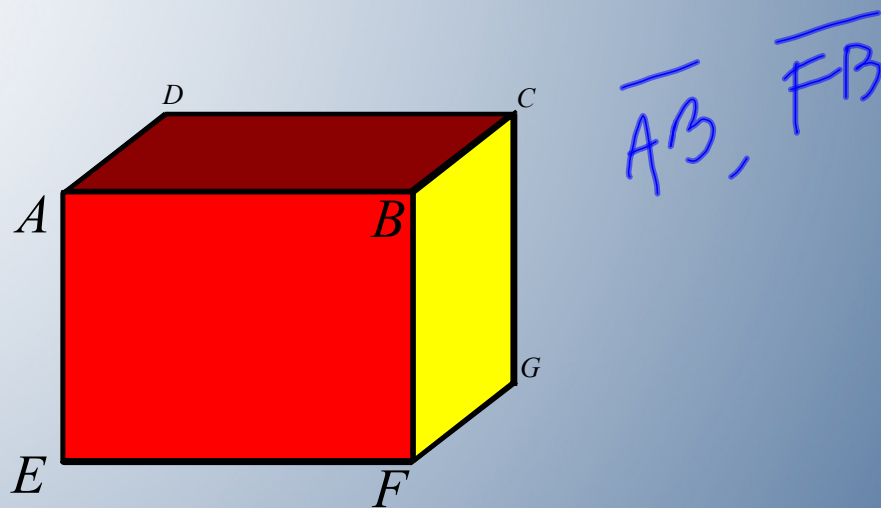

**Name all the segments and rays formed:**

If 2 lines are not parallel, will they intersect?

### Skew Lines

- **Noncoplanar** lines that do not intersect
- No symbol to represent skew lines...sorry bout that :(

What do we call planes that do not intersect?

What do we call planes that do not intersect?

...drum roll please...

What do we call planes that do not intersect?

...drum roll please...

**Parallel planes**

What would **plane AFGD** look like?

What would **plane AFGD** look like?

### L1.3 HW Problems

Pg 19, #1-49 odd, 58, 60

Pg 23, #1-10
