$$108 = \frac{1}{2}bh$$

$$A = \frac{1}{2}bh$$

$$b : h \rightarrow 3 : 2$$

$$\frac{b}{h} = \frac{3}{2}$$

$$3b \rightarrow 2h$$

$$\begin{matrix} 18 \\ 3x \\ b \end{matrix}$$

$$\begin{matrix} 12 \\ 2x \\ h \end{matrix}$$

$$A = 108$$

$$108 = \frac{1}{2}(3x)(2x)$$

$$\frac{1}{2}(3x)(2x) = \frac{6x^2}{2} = 3x^2$$

$$3x^2 = 108$$

$$\sqrt{x^2} = \sqrt{36}$$

$$x = 6$$

$$\frac{1}{2}bh$$
$$bh$$

$$\frac{14, 48, 50}{50^2 = 2500}$$
$$14^2 + 48^2 = 2500$$

\Rightarrow yes!

...can you find another (not a simple multiple)?

Uses of Pythag Thm

Uses of Pythag Thm

- Form a right angle (and Δ)

Uses of Pythag Thm

- Form a right angle (and Δ)
- Find legs or hypot of a rt Δ

Uses of Pythag Thm

- Form a right angle (and Δ)
- Find legs or hypot of a rt Δ
- Find area of a Δ

Uses of Pythag Thm

- Form a right angle (and Δ)
- Find legs or hypot of a rt Δ
- Find area of a Δ
- Classify Δ as right, acute, or obtuse

Questions...

Next...

Example 1

Is 4, 6, 7 a Pythag Triple (Y/N)?

$$\begin{array}{l} 4^2 + 6^2 \stackrel{?}{=} 7^2 \\ \downarrow \qquad \downarrow \\ 16 + 36 = 52 \qquad 49 \\ \neq \\ \text{NO} \end{array}$$

- 1 No
Yes

Example 2

Is **16, 30, 34** a Pythag Triple (Y/N)?

$$16^2 + 30^2 = 34^2$$

Handwritten calculation showing the verification of the Pythagorean triple (16, 30, 34). The equation $16^2 + 30^2 = 34^2$ is written in red. Below it, the left side is expanded: $256 + 900 = 1156$. An arrow points from the right side of the main equation to the value 1156. Below the calculation, there is a circled equals sign followed by the word 'yes'.

- 2** Yes
No

Example 3 - Use Pythag Thm to...

Find x (round to 100th):

$$\begin{aligned}a^2 + b^2 &= c^2 \\x^2 + 10^2 &= 12^2 \\x^2 &= 12^2 - 10^2 \\x^2 &= 144 - 100 \\\sqrt{x^2} &= \sqrt{44} \\x &= 6.63\end{aligned}$$

Example 4 - Find area...

The hypot of an
isos rt Δ is len 20 cm.

Find the area.

$$\begin{aligned}a^2 + b^2 &= c^2 \\x^2 + x^2 &= 20^2 \\2x^2 &= 400 \\x^2 &= 200 \\x &= \sqrt{200}\end{aligned}$$

$$\begin{aligned}A &= \frac{1}{2} b \cdot h \\&= \frac{1}{2} (\sqrt{200}) (\sqrt{200}) \\&= \frac{1}{2} \cdot 200 \\&= 100\end{aligned}$$

...back

Converse of the Pythag Thm (Thm 7-5)

If the sum of the squares of the lengths of 2 sides of a Δ equals the square of the len of the 3rd side, then the Δ is a rt Δ .

Converse of the Pythag Thm (Thm 7-5)

Is this a rt Δ ?

Converse of the Pythag Thm (Thm 7-5)

Is this a rt Δ ?

nope... $4^2 + 6^2 \neq 7^2$

Using the Pythag Thm to classify Δ 's

$$c^2 = a^2 + b^2 \longrightarrow$$

$$c^2 \neq a^2 + b^2 \longrightarrow$$

$$c^2 > a^2 + b^2 \longrightarrow$$

$$c^2 < a^2 + b^2 \longrightarrow$$

Using the Pythag Thm to classify Δ 's

$$c^2 = a^2 + b^2 \longrightarrow \text{right } \Delta$$

$$c^2 \neq a^2 + b^2 \longrightarrow$$

$$c^2 > a^2 + b^2 \longrightarrow$$

$$c^2 < a^2 + b^2 \longrightarrow$$

Using the Pythag Thm to classify Δ 's

$$c^2 = a^2 + b^2 \longrightarrow \text{right } \Delta$$

$$c^2 \neq a^2 + b^2 \longrightarrow \text{not a right } \Delta$$

$$c^2 > a^2 + b^2 \longrightarrow$$

$$c^2 < a^2 + b^2 \longrightarrow$$

Using the Pythag Thm to classify Δ 's

$$c^2 = a^2 + b^2 \longrightarrow \text{right } \Delta$$

$$c^2 \neq a^2 + b^2 \longrightarrow \text{not a right } \Delta$$

$$c^2 > a^2 + b^2 \longrightarrow \text{obtuse } \Delta$$

$$c^2 < a^2 + b^2 \longrightarrow$$

Using the Pythag Thm to classify Δ 's

$$c^2 = a^2 + b^2 \longrightarrow \text{right } \Delta$$

$$c^2 \neq a^2 + b^2 \longrightarrow \text{not a right } \Delta$$

$$c^2 > a^2 + b^2 \longrightarrow \text{obtuse } \Delta$$

$$c^2 < a^2 + b^2 \longrightarrow \text{acute } \Delta$$

Thm 7-6

If $c^2 > a^2 + b^2$ then obtuse \triangle

Thm 7-7

If $c^2 < a^2 + b^2$ then acute Δ
